Reptiles and amphibians

Reptiles and amphibians

Reptiles and amphibians are the “cold-blooded” creatures of our world. Most amphibians, which include frogs and toads, live near water. Reptiles, such as snakes and lizards, are found both on land and in water.

Cold-blooded
Cold-blooded creatures do not have cold blood. Cold-blooded means they are the same temperature as the air or water around them. If they are cold, they sunbathe. If hot, they seek shade.

Reptiles have scaly skin.

Picture Detective
Take a look through the reptiles and amphibians pages and see if you can spot who these skins belong to.

Turn and learn
Creatures with scales:
pp. 142-151

80 Are snakes reptiles or amphibians?

81 Snakes are reptiles.
